## Welcome to EOS Workbench

EOS Workbench is a web-based collaborative platform with a difference. The EOS Workbench stands out by providing a hybrid front and back office to provide an integrated workspace to create a data collaboration hub with your clients.

Built in a low-code environment, EOS Workbench has the added benefit of requiring less time to produce and program applications than conventional system development.

Each EOS Workbench platform is configured to meet the individual requirements of your business needs by activating the applications applicable to your business operations and adding bespoke branding. A growing list of applications provides each organisation with the tools to evolve and scale workflows based on usage.

## Why should I consider using the EOS Workbench?

Designed to improve efficiency and customer engagement, EOS Workbench acts as the first step in the data transfer mechanism between the insured and the carrier. This easy and efficient platform acts as the data entry point for both you and your client, providing two-way data communication through the use of a singular platform interface.

Applications that are currently available for configuration include an accounts module for statement and debit note, onboarding of new clients, policy compliance, indications, and Quote & Bind.

However, being a low-code solution, and driven by client requirements, new applications can be developed considerably quicker than conventional software development.

### Share

Use EOS to improve client service with secure shared access to a common, single source of the truth for static documents.

### Gather

Use EOS to quickly gather high level risk details or key partner information from partners themselves.

### Publish

Use EOS to make scheduling the publication of key NOVUS documents to clients easy, giving clients access to those documents 24/7.

### Collaborate

Use EOS to collaborate with third-parties using our rich features of apps, safely, and securely.

## Technology behind EOS Workbench

Morning Data host EOS Workbench on AWS, so performance and availability are guaranteed. The EOS Workbench platform is built on the Liberty Create solution provided by Netcall. Netcall ([www.netcall.com](http://www.netcall.com)) is a UK company, and Liberty Create is a market leading AI-powered Automation & Customer Engagement platform that facilitates huge transformational changes, fast. So the customer experience transforms: radically, organically, and, most importantly of all, rapidly.

The EOS Workbench platform is fully integrated back into the NOVUS and HELIX back-office solutions provided by Morning Data. The data is sent between platforms using an API engine, named Mercury, developed and provided by Morning Data,

## About Morning Data

Morning Data is a leading supplier of world-class software and service solutions for the global insurance industry. Morning Data has been providing state-of-the-art Insurance Software Systems to its clients since 1983.

You will benefit from a partner with over 30 years' experience and a client-centric focus, as we strive to support the global market with facilitating simpler and more cost-effective electronic trading and automated processing. This support for automation in the market will open opportunities for Coverholders, Brokers and Carriers to benefit from reducing administration and the provision of information quickly to interested parties.

Providing you with the perfect blend of technology and people, our mission is to provide superior software solutions for Reinsurance and Wholesale Brokers, Underwriting Agencies, Direct Insurers, Re-insurers and Underwriters, giving excellent value for money, exceptional support facilities and continuous development, whilst anticipating client, industry and regulatory requirements.
